

HEMOSCAN CLINICAL REPORT

Report ID: HemoScan_Avinash__2026-02-27T04-17-10-906Z

PATIENT INFORMATION

Name: Avinash

Contact: 9876542710

Age/Gender: 21 / m

Date: 27/2/2026, 9:47:10 am

DIAGNOSTIC STATUS
NOT ANEMIC

Confidence: 21.83%

DETAILED LABORATORY FINDINGS

PARAMETER	VALUE	REFERENCE RANGE	STATUS
Hemoglobin	17.5	13.5 - 17.5 g/dL	Normal
RBC	4.1	4.5 - 5.9 million/ μ L	Low
PCV	34.2	41 - 50 %	Low
MCV	82	80 - 100 fL	Normal
MCH	26.5	27 - 33 pg	Low
MCHC	31.5	32 - 36 g/dL	Low

CLINICAL INTERPRETATION

The patient's data shows a significant deviation from normal values for Hematocrit (PCV) and RBC count. The PCV is typically three times the RBC count, and the current values show a low confidence in the ML prediction, necessitating further clinical correlation and possibly repeat testing required to rule out laboratory error.

REQUIRED FOLLOW-UP TESTS:

- Peripheral Blood Smear Examination
- Serum Iron and Ferritin Profile
- Reticulocyte Count
- Repeat CBC for verification
