

# HEMOSCAN CLINICAL REPORT

Report ID: HemoScan\_Avinash\_\_2026-02-27T04-24-06-602Z

## PATIENT INFORMATION

Name: Avinash

Age/Gender: 21 / m

Contact: 9468213961

Date: 27/2/2026, 9:54:06 am

## DIAGNOSTIC STATUS NOT ANEMIC

Confidence: 21.83%

## DETAILED LABORATORY FINDINGS

| PARAMETER  | VALUE | REFERENCE RANGE            | STATUS |
|------------|-------|----------------------------|--------|
| Hemoglobin | 17.5  | 13.5 - 17.5 g/dL           | Normal |
| RBC        | 4.1   | 4.5 - 5.9 million/ $\mu$ L | Low    |
| PCV        | 34.2  | 41% - 50%                  | Low    |
| MCV        | 82    | 80 - 100 fL                | Normal |
| MCH        | 26.5  | 27 - 33 pg                 | Low    |
| MCHC       | 31.5  | 32 - 36 g/dL               | Low    |

## CLINICAL INTERPRETATION

The patient is classified as 'Not Anemic' based on the Hemoglobin level. However, the RBC count and PCV are low, which contradicts the 'Not Anemic' classification. The MCHC is also low, suggesting hypochromic cells. The patient may be struggling with these conflicting findings.

## REQUIRED FOLLOW-UP TESTS:

- Repeat CBC with Peripheral Smear
- Reticulocyte Count
- Iron Studies (Serum Iron, Ferritin, TIBC)
- Correlation with clinical symptoms
