

HEMOSCAN CLINICAL REPORT

Report ID: HemoScan_Avinash__2026-02-27T04-24-48-746Z

PATIENT INFORMATION

Name: Avinash

Contact: 9468213961

Age/Gender: 21 / m

Date: 27/2/2026, 9:54:48 am

DIAGNOSTIC STATUS NOT ANEMIC

Confidence: 21.83%

DETAILED LABORATORY FINDINGS

PARAMETER	VALUE	REFERENCE RANGE	STATUS
Hemoglobin	17.5	13.5 - 17.5 g/dL	Normal
RBC	4.1	4.5 - 5.9 million/ μ L	Low
PCV	34.2	41 - 50%	Low
MCV	82	80 - 100 fL	Normal
MCH	26.5	27 - 33 pg	Low
MCHC	31.5	32 - 36 g/dL	Low

CLINICAL INTERPRETATION

The patient is classified as 'Not Anemic' based on the hemoglobin level. However, the clinical picture is contradictory as the RBC count, PCV, MCH, and MCHC are all below the standard physiological 'Rule of 3' (RBC > 4.5 million/ μ L, PCV > 41%, MCH > 27 pg, MCHC > 32 g/dL), indicating hypochromia. The extremely low RBC count is a conflicting data point. This suggests a potential hemoglobinopathy or iron deficiency.

REQUIRED FOLLOW-UP TESTS:

- Repeat CBC with Peripheral Blood Smear
- Serum Iron Studies
- Ferritin Level
- Reticulocyte Count
